## EXPERIENCE

### SYNRGY Academy

Agu 2022 – Feb 2023

*Full Stack Web Developer Intern*

*Remote*

- Participated in the Agile development process, including daily standups, sprint planning, and retrospectives, which enhanced team communication and collaboration.
- Built custom reusable UI components using popular libraries like Material UI or Bootstrap, which reduced development time and increased consistency across different projects.
- Developing responsive web applications using JavaScript frameworks such as React and Next.js.
- Worked with back-end technologies like Node.js or Express to build RESTful APIs and server-side functionality.

### PT. Promedia Citra Informatindo

Jul 2022 – Nov 2022

*Web Developer Intern*

*Surabaya, East Java*

- Worked as a web developer intern in a team that built web applications using PHP, which involved developing and maintaining code for various web-based projects.
- Collaborated with senior developers and project managers to understand business requirements and provide technical solutions to meet client needs.
- Developed PHP code for front-end and back-end systems, which included building and integrating APIs, managing databases, and creating user interfaces.
- Used PHP frameworks like Laravel or CodeIgniter to streamline development processes and improve code efficiency.

## PROJECTS

### Kosthub 🔗 | Next, Tailwind, Sequelize, Express

- Collaborated with a team to develop a program for searching for boarding houses using Next.js frameworks, which simplified the development process of a complex application.
- Developed a service for requesting OTP verification via email and WhatsApp to enhance the security.
- Created a service to handle a superadmin CMS that enables obtaining detailed information on orders, rooms, and users, which helps in managing and optimizing business operations

### SIMKEU 🔗 | NuxtJS, Vuetify, Express, PostgreSQL

- Developed a financial management information system from scratch using Nuxt.js framework, which involved building a web application with a user-friendly interface for managing financial data.
- Utilized Vue.js, Vuex, and other front-end technologies to build responsive and scalable web pages that integrate with the back-end.
- Designed and implemented various features of the system, such as user authentication, data visualization, reporting, and data management.

### IKM Batu 🔗 | PHP, Yii, Bootstrap, SQL

- Developed a web application for Small and Medium Enterprises using the Yii PHP framework, which involved building a scalable, robust, and secure system to manage various aspects of the business.
- Utilized the Yii PHP framework to build a responsive and efficient web application that integrated with the back-end.
- Worked with databases like MySQL to store and manage data, and implemented database migrations to maintain the consistency of the database schema.
